

Empathy Map Canvas

Project: Employee Software Installation Request (ServiceNow)

Persona: The Requesting Employee

A full-time employee who needs a specific licensed software tool installed on their laptop/desktop to complete their assigned work.

THINK & FEEL ● "I hope this doesn't take weeks like last time." ● Worried the request will get lost in someone's inbox. ● Frustrated not knowing who to even ask. ● Wants to look competent to their manager, not stuck waiting on IT.	SEE ● Colleagues struggling with the same informal request process. ● No dashboard or tracker showing request status. ● Deadlines approaching that depend on this software. ● IT team appears busy and hard to reach.
SAY & DO ● Sends an email or Slack message to IT/manager asking for software. ● Follows up repeatedly asking "any update?" ● Asks colleagues informally if they know the process. ● Sometimes escalates to their manager to speed things up.	HEAR ● "Let me check and get back to you." ● "IT is swamped right now." ● Colleagues complaining about similar delays. ● Manager asking "did you get that software sorted yet?"

Pain Points

- No visibility into request status
- Unclear who approves the request
- No confirmation of receipt
- Delays with no explanation

Gains (What Would Make This Better)

- A simple guided form to submit the request in minutes
- Automatic routing to the correct manager for approval
- Real-time status tracking (Requested / Approved / In Progress / Closed)
- Email confirmation at each stage of the process
